

ASSIGNMENT-2

1. You want to see a horror movie(Movie Name Scream) in a multiplex. In your city, you have 12 multiplexes. You will travel from your home to see the movie. You can assume the following points :

- a. Some of the Multiplexes are playing the movie not all
- b. All the Multiplexes have parking slot.
- c. All the distances from one to another multiplexes are not same.
- d. To watch the movie the multiplex must have a vacant parking slot.

Solve the problem with a suitable searching algorithm.

To address the case study , you have to address the following points :-

- i) Assumptions
- ii) Constraints
- iii) Graph/Diagram representation of the proposed idea model
- iv) Lemma/Proof with proper statements
- v) Conclusion with explanation

2. Include 2 more disks in the Tower of Hanoi Problem and show all the Constructed sequences.

3. You want to travel to some hilly zone of North Bengal. The assumed heights are as follows :

Darjeeling- 5076 Feet

Falut---5089 feet

Mirik- 4023 feet

Rangit Riverside- 5055 feet

Maldiram—6066 feet

Travel your cost-effective plan with a proper example of the graph.

● Case Study Problem Solution Points :

1. Assumptions
2. Constraints
3. Formulation
4. Graph Representation / Transition
